Project Manager needed for residential, commercial and industrial HVAC Company.

The ideal candidate would have experience and be able to perform the below:

- This is an in-field position with 1-2 office days for administrative purposes
- Distinguish required labor schedule and material for each project
- Evaluate updated plans as they are released for each project and issue change orders accordingly
- Determine costs using labor and material pricing schedules
- Coordinate material and equipment lists for each project
- Release equipment to adhere to project schedules
- Analyze specifications and blueprints
- Travel as necessary to job sites to attend meetings and walk the sites
- Order materials for projects on a cost effective basis
- Build rapport and maintain relationships with general contractors
- Interact with field supervisors and oversee technicians

This position would report directly to the Executive Vice President. Project Manager will be supplied with a laptop and tablet for in-field connectivity. Office support as necessary.
